DETECT THREAT MANAGEMENT SOLUTION

As the technology used to smuggle contraband in to prisons continues to advance, it is essential that any threat management solution is able to respond to the increasing sophistication of technology, and availability of threats to prison security.

With Unify DETECT, we can manage these threats to the prison and the local community by intercepting the unauthorised use of mobile devices within prison grounds.

USAGE

Unify Mobile Detection will alert you to any mobile phone usage within the prison, with 24/7 real time alerts, heat map visualisation and historical reporting of all detection events.

IDENTITIES

Used in conjunction, Unify Mobile Detection will identify mobile phone usage to allow the security team to piece together the identities of the prisoners responsible.

PROTECT

By detecting and intercepting attempts to bring unauthorised items into a prison, prisoners and staff are protected from exposure to hazardous substances, weapons and other items that could pose a threat to their safety.

MOBILE DETECTION

MAC ADDRESS RECOGNITION

The system can detect the MAC address of the mobile phone, which will identify the type of phone in use. Handset manufacturer can be derived using MAC details.

COVERT

Detectors are subtle and covert to avoid being identified by prisoners.

ADJUSTABLE DETECTION SENSITIVITY

Detection levels can be adjusted to suit the building fabric.

HISTORICAL DETECTION

Reports can be autogenerated to assist in usage patterns.

FULL REPORTING

System will produce reports highlighting times & places of most frequent activity.

REAL-TIME DETECTION

Real-time alerts of detected mobile signals.

MULTI-SIGNAL MOBILE DETECTION

2G, 3G, 4G, Wifi & Bluetooth detection across 8 frequency bands. Carrier specificity can be derived.

DATA EXPORT

All sightings and calculations can be easily exported.

LIVE ALERTS

Live alerts as and when a mobile is detected.

WHAT OUR CUSTOMERS SAY

Users of the UNIFY DETECT solution range from Prisons, YOIs, STCs and IRCs. We asked our customers how the solution works in their environment.

“Using the UNIFY Mobile detection solution has enabled us to make arrests for mobile phone smuggling.”

“The system is user friendly & utilises a discreet yet effective use of technology, optimising efficient staff deployment at the right place.”

“An excellent piece of equipment to have at our disposal.”

INTERACTIVE MAPS

Grid view, vertical stacked view and isometric view to suit user preference.

CONFIGURABLE WHITELIST

Devices using WiFi and Bluetooth can be whitelisted.

TARGETED CELL LOCATION FILTERING

Click and drag on the map to select particular areas of interest.

MARKED TIMELINE

Horizontal navigation left and right along timeline, with visual marks as indicators of times with mobile detections.

LIVE VIEW & HEAT MAP VISUALISATION

Detections are visualised on the heat-map, identifying the strength of the signal, pinpointing the signal accurately to the correct location.

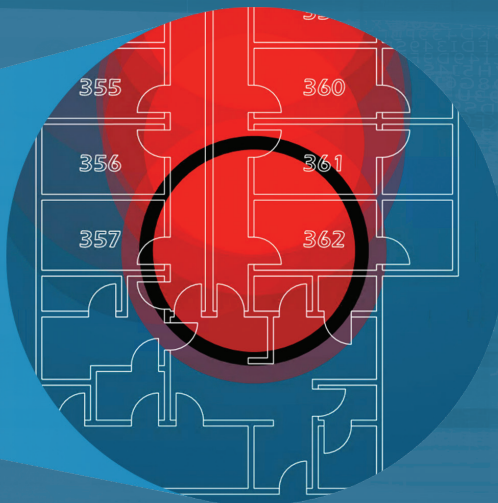

MULTIPLE LOCATION DETECTION CAPABILITY

Detect multiple mobile signals in different locations at any one time.

COMING SOON

IMSI (INTERNATIONAL MOBILE SUBSCRIBER IDENTITY) LISTENING

To assist in disabling devices, and allow passive identification of individual mobiles.

“It has helped us identify use of even the smaller Beat the BOSS style phones.”

“UNIFY Mobile Detection is simple to use & we can identify a mobile’s location easily, right down to the cell.”

“The capability of this technology is, in no simpler terms, outstanding”.

“The mobile recovery rates speak for themselves!”

“An important part of the challenge to tackle mobile phones within our prison.”

Providers of **innovative technology solutions to the Custodial sector**, supporting the provision of safer, more technologically advanced prison environments.
